3.2. Seniors and digital skills around Europe

MODULE 3 - Codesigning activities to promote digital competence with seniors

- Following Commission President Ursula von der Leyen's call for greater digital leadership and a common vision for 2030 as well as the European Council's request that the EU develop a Digital Compass, the Commission adopted in March 2021 the **2030 Digital Compass: the European Way for the Digital Decade Communication**. It sets out the EU's digital ambitions and lays out its vision for digital transformation by 2030.
- As projected in the Communication and in response to a call from the European Council, on 15 September 2021 the Commission adopted a proposal for a Decision on a Path to the Digital Decade, setting out the digital targets the EU as a whole is expected to reach by the end of the decade. **The 2030 target of the Digital Compass is that at least 80% of citizens have at least basic digital skills.**

Europe's Digital Decade: digital targets for 2030

Europe plans to empower businesses and people in a human-centred, sustainable and prosperous digital future,...

[More info here](#)

The most current data on digital literacy in Europe are provided by a report published annually by the [Digital Economy and Society Index of the European Commission \(DESI\)](#), which monitors Europe's overall digital performance and tracks the progress of EU countries in their digital competitiveness.

- 87% of people (aged 16-74) used the internet regularly in 2021, only 54% possessed at least basic digital skills.
- Only 42% of those aged 55-64 and 25% after 65 years old have at least basic digital skills.

Concerns of the Elderly Population regarding **TECHNOLOGY**

- Many seniors struggle with touch screens due to a condition called leathery fingers.
- Mastering new technology is often complicated as the seniors have no experience in using technology to use as a baseline.
- Technological Accessibility is still not a reality – small letters, complicated instructions, lack of contrast....
- Data Protection worries a lot of seniors and they recognise they need more Digital Literacy, Including Familiarity With Terminology
- But also Technologists need more Aging Literacy!
- Voice-Activated Tools is one of the best tools for technological inclusion of seniors.

General Guidelines Regarding Digital Education with Seniors

Digital literacy programs can empower older persons, foster social participation, and increase older adults' autonomy. Independence and tailored peer- or intergenerational training initiatives targeted at older persons have proven to be effective in enhancing their digital literacy. Having in mind a practical framework of digital competence is crucial to choose the content and methodology of the training program.

To be fully inclusive, the digital education action plan should also seek to:

- improve the accessibility of online learning content;
- improve the 'physical' accessibility of digital devices;
- encourage digital training attendance in places where older persons are and live, such as in long-term care services or public libraries;
- fully embrace opportunities of non-formal and informal learning;
- **cocreate** the content and structure of the training with the seniors in order to meet their needs and interests!
